

## 13 6 on solar charge controller deep cycle battery

A charge controller, or charge regulator, is basically a voltage and/or current regulator to keep batteries from overcharging. It regulates the voltage and current coming from the solar panels going to the battery. Most "12 volt" panels put out ...

My batteries aren't charging and the only thing I can think of is because the charge controller is limiting the input going to my batteries since it thinks it's at a different level of charge. All the wires are connected properly and my solar ...
