

8120 movement power storage time

How accurate is the watchuseek 8120 (Shanghai B) movement?

The 8120 (Shanghai B) movement is a 17 jewel hand winding unit. Information is not abundant, but the fine fellows on the Watchuseek Chinese Mechanical Watch Forum say it is accurate and reliable. My own timing runs indicate a loss of about 25 seconds in 24 hours, which is about what I would expect and more than sufficient for daily use.

Is the watchuseek 8120 a good watch?

Cracked leather goes well with this watch, and NATO straps are a good fit with those long lugs. The 8120 (Shanghai B) movement is a 17 jewel hand winding unit. Information is not abundant, but the fine fellows on the Watchuseek Chinese Mechanical Watch Forum say it is accurate and reliable.

Is the 7120 more reliable than the 8120?

The 7120 was a more reliable movement IMO as it was made in huge numbers, and 8120 was a later movement by Shanghai in an attempt to make a thinner movement. My impression of the 8120 was not as durable as the 7120 although I have not tested them against each other. They are sold at about the same price at local flea markets.

Is the HMT 8120 a bad strap?

It is not a bad strap and far nicer than what you might get from HMT, but the Shanghai cries out for a strap swap. Cracked leather goes well with this watch, and NATO straps are a good fit with those long lugs. The 8120 (Shanghai B) movement is a 17 jewel hand winding unit.

Is the Eterna 8120 a reissue?

The 8120 is labeled as a reissue, but I have yet to find the Shanghai original. Regardless, it is clearly an homage to Eterna's 1958 classic. It borrows the triangular frames, arrow-shaped hour markers, dauphine hands, even the wood grain texture in the center of the dial. Of course, it does not try to pass itself off as the genuine article.
