

# Act government solar battery subsidy

Can act homeowners get a solar battery rebate?

ACT homeowners can combine the Sustainable Household Scheme loan with federal STC incentives or ACT-based rebates like the Home Energy Support Program. Australians may also benefit from the new Federal Solar Battery Rebate,officially launching on 1 July 2025 under the Cheaper Home Batteries Program.

Why do act residents get solar subsidies?

To promote sustainable energyand to help ACT residents afford energy-efficient upgrades,the ACT Government &Federal Government provides a good amount of solar subsidies like solar panel rebates,incenives and interest-free loans.

Why do act residents get solar rebates?

These solar rebates,zero-interest loans,and other incentives help ACT residents for installation of rooftop solar panels,battery energy storage systems,solar hot water systems etc. and ultimately reduce their energy bills &carbon emissions.

What is a solar rebate or subsidy?

A rebate or subsidy will cover part or all of the upfront cost of buying solar or a battery. Rebate schemes operated by states,territories and local governments sometimes only apply to particular groups of people or types of housing,such as social housing,rental properties or apartments. Eligibility criteria may relate to:

How much subsidy does a solar battery system get?

Unlike in South Australia, the only limit to the subsidy is the amount of power your battery is permitted to supply to the grid. So a home or business with three phase power could install a massive -- and very expensive -- solar battery system that can provide up to 30 kilowatts of continuous power and receive a subsidy of up to \$24,450.

Will Australians benefit from the new solar battery rebate?

Australians may also benefitfrom the new Federal Solar Battery Rebate,officially launching on 1 July 2025 under the Cheaper Home Batteries Program. This confirmed national rebate will offer up to 30% off eligible battery systems--potentially saving homeowners around \$3,500 to \$4,700 on a typical 10-13.5 kWh setup.
