

Analysis of risk avoidance countermeasures in energy storage industry

Are safety engineering risk assessment methods still applicable to new energy storage systems?

While the traditional safety engineering risk assessment methods are still applicable to new energy storage systems, the fast pace of technological change is introducing unknowns into systems and creates new paths to hazards and losses (e.g., software control).

Can a large-scale solar battery energy storage system improve accident prevention and mitigation?

This work describes an improved risk assessment approach for analyzing safety designs in the battery energy storage system incorporated in large-scale solar to improve accident prevention and mitigation, via incorporating probabilistic event tree and systems theoretic analysis. The causal factors and mitigation measures are presented.

Is systemic based risk assessment suitable for complicated energy storage systems?

This paper demonstrated that systemic based risk assessment such as Systems Theoretic Process Analysis (STPA) is suitable for complicated energy storage systems but argues that elements of probabilistic risk-based assessment need to be incorporated.

Which risk assessment methods are inadequate in complex power systems?

Traditional risk assessment methods such as Event Tree Analysis, Fault Tree Analysis, Failure Modes and Effects Analysis, Hazards and Operability, and Systems Theoretic Process Analysis are becoming inadequate for designing accident prevention and mitigation measures in complex power systems.

What are the gaps in energy storage safety assessments?

One gap in current safety assessments is that validation tests are performed on new products under laboratory conditions, and do not reflect changes that can occur in service or as the product ages. Figure 4. Increasing safety certainty earlier in the energy storage development cycle. 8. Summary of Gaps

Are grid-scale battery energy storage systems safe?

Despite widely known hazards and safety design of grid-scale battery energy storage systems, there is a lack of established risk management schemes and models as compared to the chemical, aviation, nuclear and the petroleum industry.
