

Are solar batteries worth it 2021

Is a solar battery worth the cost?

A solar battery works best when it's combating the typical constraints of the grid, such as higher demand in the evenings or more expensive power prices during peak times. Your reliance on grid energy may also play a part in deciding whether solar storage is worth the cost.

Should you buy a solar battery?

Whether to save money on your bills or reduce your carbon emissions, a solar battery will be able to help you build a foundation for independent energy usage - granted you can afford the upfront cost of solar batteries. Before making a decision, it's a good idea to get the opinion of a solar installer first.

Are solar batteries a good investment?

While solar batteries will help you cut costs on your electricity bill by reducing your reliance on the grid, they are still a significant financial investment.

How much does a solar battery cost in Australia?

Prices in Australia typically cost between \$870 - \$2,060 per kilowatt hours(kWh) of storage capacity. A solar battery and installation can cost up to \$12,000 or more in some cases. Solar battery storage technology has generated a lot of discussion within the energy industry in recent years, and for good reason.

Are solar batteries financially viable?

It breaks down how these batteries function, advantages such as lower energy bills, reliability during blackouts, battery prices, and available government rebates. In short, the answer is that solar batteries are now financially viable in many cases with the inclusion of the national battery rebate announced in 2025.

How much battery does a solar project use?

The battery is recharged completely on 98.5% of the days. Given the high cost of batteries, we recommend including enough solar panels to reach at least an 80% battery utilisation. The below table shows that the solar side of the project has better financial return.
