

# Average LFP battery system price per 1GW in New Zealand

How much do LFP batteries cost?

With both the EV industry and stationary storage sectors increasingly adopting batteries with LFP cathode chemistry, LFP pack average prices were found to be US\$130/kWh and LFP cells at US\$95/kWh. LFP is now just less than 1/3 (32%) cheaper than NMC.

How much does a solar battery cost in New Zealand?

The lowest price paid was \$8,000 for a 6 kWh battery, which implies that smaller systems can be more accessible for those on a budget. The best value was \$9,000 for a 9.6 kWh battery, equating to \$937.50 per kWh. Indicating the batteries below \$1000/kWh can be hunted down in the NZ market. What's Next for Solar Prices in 2025?

How much does a battery cost per kWh?

Despite these limitations, here's what the small dataset revealed: Key Insights: Battery Cost Per kWh: The average price per kWh is \$1,249.79, which sets a benchmark for assessing battery affordability in the market (since we don't have much previous data on battery prices in NZ).

How much does a battery system cost?

Overall Costs: The average total price paid for a battery system is \$14,396, indicating that energy storage is still a significant investment for many. The lowest price paid was \$8,000 for a 6 kWh battery, which implies that smaller systems can be more accessible for those on a budget.

How much does a PHEV battery cost per kWh?

Battery costs per kWh vary significantly by application. In 2024, PHEV battery packs cost over three times more per kWh than BEV packs due to smaller size and higher power needs. IEA remarks that a typical 20 kWh PHEV battery pack costs roughly the same as a standard 65 kWh BEV pack despite the substantial capacity difference.

Are LFP batteries good for EVs?

"However, LFP batteries have now reached a performance level sufficient for most EV applications, making their lower cost a key advantage for automakers aiming to mass markets." Electric vehicle battery sales share by chemistry and region, 2022-2024. Courtesy of IEA. Licence: CC BY 4.0

The cost and performance of the battery systems are based on an assumption of approximately one cycle per day. Therefore, a 4-hour device has an expected capacity factor of 16.7% ( $4/24 = 0.167$ ), and a 2-hour device has an expected ...

The global weighted average price for lithium ion cell prices has dropped below \$100 per kilowatt-hour for the

## Average LFP battery system price per 1GW in New Zealand

first time in two years on the back of falling raw material prices. The latest average price from the Benchmark Lithium ion ...

Lithium-ion (Li-ion) EV battery prices have decreased dramatically over the past few years, mainly due to the fall in prices of critical battery metals: Lithium, cobalt and nickel. For example, the price of cobalt has fallen from roughly \$70,000 ...
