

Average business energy storage price per 500MW in Mexico

Can a battery energy storage system complement a PV plant in Mexico?

An analysis was carried out to verify if it would be commercially feasible to operate a Battery Energy Storage System (BESS) to complement the operation of a PV plant in the Mexican market. This PV plant would generate a revenue through the contracting via the 2015, 2016 or 2017 LTAs in Mexico.

How much does a power plant cost per MW?

This value is in line with typical market conditions worldwide, where the contracted operation of such services is typically between 150,000 USD and 400,000 USD (3 to 8 million MXN) per MW and year.

Is electrical energy storage system use case a source of revenue?

An Electrical Energy Storage System use case for the capacity component only exists if a capacity component was awarded in the auctions. Therefore, no revenue can be generated from the results of the 2015 auctions due to a lack of awarded capacity bids. However, capacity is a possible source of revenue from the 2016 and 2017 auctions.

How much power does a battery energy storage system use?

A typical Battery Energy Storage Systems in standby only consumes between 0.5 - 2% of its nominal power (e.g., a BESS with a nominal power of 1 MW would have an average auxiliary power consumption of 5 kW - 20 kW) and can be started from the "cold" offline state to the "hot" running state within 5 seconds or less.

Can energy storage systems be re-used?

As most energy storage systems are coupled through inverters, most best practices from PV and wind power plants can be re-used. Care has to be taken since BESS differ from PV and wind power plants since they do not only export energy, but import energy as well.

Why do we need energy storage?

The current main driver for the need for energy storage is the fact that renewable energies in general, and particularly photovoltaic and wind power plants (variable Renewable Energies - vRE), are increasingly entering the electricity market whilst displacing conventional technologies.

The largest price component, lithium ion battery price, will hold a decent amount of stability across installations in this sector - as long as you hit a minimum size. This minimum size, per industry experience, starts at a battery with a 500 kW ...

The battery storage technologies do not calculate LCOE or LCOS, so do not use financial assumptions. Therefore all parameters are the same for the R&D and Markets & Policies Financials cases. The 2023 ATB represents cost and ...
