

Average domestic energy storage price per 250MW in Mexico

Can a battery energy storage system complement a PV plant in Mexico?

An analysis was carried out to verify if it would be commercially feasible to operate a Battery Energy Storage System (BESS) to complement the operation of a PV plant in the Mexican market. This PV plant would generate a revenue through the contracting via the 2015, 2016 or 2017 LTAs in Mexico.

How do electricity rates affect the economy in Mexico?

In recent years, fluctuations in these rates have had a profound impact on the cost of living and the competitiveness of Mexican industries. For households, higher electricity rates can lead to increased monthly expenses, affecting disposable income and overall quality of life.

How much does a power plant cost per MW?

This value is in line with typical market conditions worldwide, where the contracted operation of such services is typically between 150,000 USD and 400,000 USD (3 to 8 million MXN) per MW and year.

Is electrical energy storage system use case a source of revenue?

An Electrical Energy Storage System use case for the capacity component only exists if a capacity component was awarded in the auctions. Therefore, no revenue can be generated from the results of the 2015 auctions due to a lack of awarded capacity bids. However, capacity is a possible source of revenue from the 2016 and 2017 auctions.

How much power does a battery energy storage system use?

A typical Battery Energy Storage Systems in standby only consumes between 0.5 - 2% of its nominal power (e.g., a BESS with a nominal power of 1 MW would have an average auxiliary power consumption of 5 kW - 20 kW) and can be started from the "cold" offline state to the "hot" running state within 5 seconds or less.

Can energy storage systems be re-used?

As most energy storage systems are coupled through inverters, most best practices from PV and wind power plants can be re-used. Care has to be taken since EESS differ from PV and wind power plants since they do not only export energy, but import energy as well.

The battery storage technologies do not calculate levelized cost of energy (LCOE) or levelized cost of storage (LCOS) and so do not use financial assumptions. Therefore, all parameters are the same for the research and development ...
