How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

How much will electricity prices increase under new regulations?

Under the new regulations, the increase in electricity prices will range from 14.45% to 50%, depending on household electricity consumption. For prepaid meter users, the price hike took effect this past Saturday, while those with regular meters will face the new rates starting from October 1.

Base year installed capital costs for BESS decrease with duration (for direct storage, measured in \$/kWh), while system costs (in \$/kW) increase. This inverse behavior is observed for all energy storage technologies and highlights the ...
