

## Average hybrid renewable storage price per 100kW in Ukraine

Will Ukraine become an energy resource centre for Europe?

Ukraine has the potential to become an energy resource centre for Europe, as the EU faces a permanent shortage of energy due to a reduction in the export of cheap energy resources from Russia, the transition to green energy (unstable energy from the sun and wind), a lack of own production and storage capacities, an overall increase in demand.

Can Ukraine develop offshore wind energy in the Black Sea?

The recovery and development of renewables will require significant private investments, but there is a basis for them: according to the World Bank, Ukraine has one of the best technical potentials for the development of offshore wind energy in the Black Sea among all the countries of the Black Sea region.

What percentage of energy is generated by renewables?

The current share of energy generated from renewable energy sources (RES), wind, solar, biomass, biogas, and small hydro, including big hydropower projects over 10MW, is comparatively small. At the beginning of 2020, the share of renewables in energy reached 11 percent and by the end of the year reached 12.4 percent.

When does the green tariff expire in Ukraine?

The current feed-in tariff or "Green Tariffs" will expire on January 1, 2030. There are five main regions in southern Ukraine where about 66 percent of all renewable generation is located, namely Odesa, Zaporizhzhia, Mykolaiv, Kherson and Dnipro regions. Those regions have the best wind resources and highest solar insolation.

The battery storage technologies do not calculate levelized cost of energy (LCOE) or levelized cost of storage (LCOS) and so do not use financial assumptions. Therefore, all parameters are the same for the research and development ...
