

Average hybrid renewable storage price per 1MW in Brazil

Are renewable hybrid systems economically viable in Brazil?

Renewable hybrid systems with hydrogen are current economic unviable in Brazil. Green hydrogen produced from curtailment events are current economic not feasible. To produce hydrogen economically viable, the plants should operate above 3000 h. The CAPEX should cost less than USD 650/kWe to store hydrogen economically viable.

Will energy storage systems grow in Brazil?

According to CELA's findings, the market for energy storage systems in Brazil is poised for a remarkable expansion, with an estimated annual growth rate of 12.8% until 2040. The study anticipates a substantial increase in installed capacity, reaching up to 7.2 GW during this period.

Why should you invest in energy storage in Brazil?

Opportunities for Stakeholders: Investment Opportunities: The projected growth in the energy storage market presents lucrative investment opportunities for both domestic and international investors looking to capitalize on the evolving energy landscape in Brazil.

Are solar and wind hybrid systems viable in Brazil?

The model concludes that the solar and wind hybrid system for hydrogen production and storage is not yet viable in Brazil. In addition, the CAPEX of electrolyzers and storage tanks and their operating losses are key points for the deployment of these systems.

How much does it cost to store hydrogen in Brazil?

The CAPEX should cost less than USD 650/kWe to store hydrogen economically viable. It is more profitable trading hydrogen than transforming it back into power. The work aims to verify the economic feasibility of renewable hybrid systems for hydrogen production and storage in the Brazilian electric power sector.

Are solar and wind power plants viable in Brazil?

First, the capacity factor of the wind power plants, on average, become superior than the capacity factor of the solar power plants in Brazil. The model concludes that the solar and wind hybrid system for hydrogen production and storage is not yet viable in Brazil.

1) Total battery energy storage project costs average $\$580/\text{MW}$ 68% of battery project costs range between $\$400/\text{MW}$ and $\$700/\text{MW}$. When exclusively considering two-hour sites the median of battery project costs are $\$650/\text{MW}$.
