

Average industrial energy storage price per 10MW in Norway

Will high electricity prices limit consumption growth in Norway?

However, growth assumes that electricity prices are low enough. Without new Norwegian electricity production, excluding the projects that are currently under development, high electricity prices will practically limit consumption growth to an estimated 25-30 TWh.

How does the development of electricity in Norway affect the economy?

The development of electricity prices and power flow in Norway is influenced by both consumption and production in Norway, and by how the market and system develop in the Nordic region and Europe. In addition, the development in Europe has a significant impact on technology costs and the development of Norwegian industry and business activities.

Does Norway offer electricity support?

The Norwegian government launched a temporary electricity support package for households from December 2021. From the 4th quarter of 2021 and onwards, data on average electricity support is included in the electricity price statistics.

How will European and Norwegian power markets change over the next 25 years?

The European and Norwegian power markets are undergoing significant changes with increasing solar and wind power, numerous projects under development, and more variable electricity prices. Over the next 25 years, the transition to emission-free energy will continue to bring significant changes.

How is electricity collected in Norway?

Data on imports and exports of electricity is collected from Statnett. Production and consumption from Svalbard is collected directly by Statistics Norway using an own survey. Statistics Norway receives a dataset from Elhub with measured values for production and consumption of electricity for all metering points in Norway.

What are the taxes for households in Norway?

Taxes for households consist of tax on consumption of electricity, value added tax (VAT) and subsidies to Enova. All counties in Norway have the same tax rate for the consumption of electricity, apart from some parts of Troms and the whole of Finnmark, which are exempt.

Base year installed capital costs for BESS decrease with duration (for direct storage, measured in \$/kWh), while system costs (in \$/kW) increase. This inverse behavior is observed for all energy storage technologies and highlights the ...
