

Average lifespan of solar batteries

How long do solar batteries typically last?

The life expectancy of a solar battery varies depending on usage, typically lasting between five and 15 years. Keep in mind that the average solar PV panel lasts around 20-30 years, so you may need to replace these batteries twice or more during the lifespan of your panels.

How long do solar panels last?

After all, with solar panels typically lasting 30-40 years, you'll want to know how many battery systems you'll have to buy to match your panels' lifespan. We'll run through the average lifespan of different types of solar batteries, the factors that contribute to these figures, and how you can extend your battery's lifespan.

How long does a battery last?

Lead-acid batteries (flooded or sealed): These are the most traditional type and also the shortest-lived, typically lasting 3 to 7 years. They're more affordable upfront but require regular maintenance and don't hold up as well over time. When people talk about battery lifespan, they're often referring to "cycle life."

How often should a solar battery be charged?

That said, infrequent use can also cause a solar battery to go idle, and most batteries should be charged and discharged at least twice per year. Finally, the conditions in which your battery operates will affect both its daily performance and total life span.

How often should you run a solar battery?

Running too few or too many cycles can be detrimental to your battery's lifespan. A single cycle per day is a normal rate for a household with solar panels, though if you're on one of the best export tariffs, check with your installer if it'd be more profitable to run two cycles.

How much does a solar battery cost?

When the sun goes down or the power goes out, a solar battery can keep your home running on clean, renewable energy. Because they can cost between several hundred and a few thousand dollars each, it's worth making sure you'll get your money's worth.

On average, solar batteries last between 5 to 25 years. Lithium-ion batteries are the most prevalent solar battery type and have a lifespan of up to 15 years. Some factors that impact a solar battery's longevity are battery type, ...
