

# Average lithium ion storage price per 5MW in New Zealand

What are battery cost projections for 4 hour lithium-ion systems?

Battery cost projections for 4-hour lithium-ion systems, with values normalized relative to 2022. The high, mid, and low cost projections developed in this work are shown as bolded lines. Figure ES-2.

Are O&M costs lower for lithium-ion systems?

O&M costs are typically lower for lithium-ion systems due to fewer moving parts, but they should still be factored into your long-term budget. Modern BESS solutions often include sophisticated software that helps manage energy storage, optimize usage, and extend battery life.

How much does a battery cost per kWh?

Despite these limitations, here's what the small dataset revealed: Key Insights: Battery Cost Per kWh: The average price per kWh is \$1,249.79, which sets a benchmark for assessing battery affordability in the market (since we don't have much previous data on battery prices in NZ).

Are lithium ion batteries expensive?

Lithium-ion batteries are the most popular due to their high energy density, efficiency, and long life cycle. However, they are also more expensive than other types. Prices have been falling, with lithium-ion costs dropping by about 85% in the last decade, but they still represent the largest single expense in a BESS.

Are battery energy storage systems worth the cost?

Battery Energy Storage Systems (BESS) are becoming essential in the shift towards renewable energy, providing solutions for grid stability, energy management, and power quality. However, understanding the costs associated with BESS is critical for anyone considering this technology, whether for a home, business, or utility scale.

How much does a 4 hour battery system cost?

Figure ES-2 shows the overall capital cost for a 4-hour battery system based on those projections, with storage costs of \$245/kWh, \$326/kWh, and \$403/kWh in 2030 and \$159/kWh, \$226/kWh, and \$348/kWh in 2050.

The 2021 ATB represents cost and performance for battery storage across a range of durations (2-10 hours). It represents lithium-ion batteries only at this time. There are a variety of other commercial and emerging energy storage ...
