

Average office building energy storage price per 3MW in Germany

Why do we need energy storage systems in Germany?

Increasing the share of renewables poses new challenges: Excess energy produced during off-peak hours needs to be stored and made available when needed. Since energy storage systems (ESS) can balance supply and demand, they are an essential part of Germany's energy transition. In line with this, the market for ESS is constantly growing.

What happened to battery energy storage systems in Germany?

Small-scale lithium-ion residential battery systems in the German market suggest that between 2014 and 2020, battery energy storage systems (BESS) prices fell by 71%, to USD 776/kWh.

Is Germany a good place to invest in energy storage?

While the demand for energy storage is growing across Europe, Germany remains the European lead target market and the first choice for companies seeking to enter this fast-developing industry. The country stands out as a unique market, development platform and export hub.

How much does Germany spend on EV and stationary battery research?

Public research and development incentives for EV and stationary battery research amount to between EUR 80 million and EUR 85 million every year. As the European lead market in the energy transition age, Germany provides the opportunity for companies to develop, test, define and market new energy storage solutions.

How many home storage units are there in Germany?

In 2020, more than 100,000 home storage units were implemented across Germany, bringing the total number to 300,000. In 2018, photovoltaic (PV) and energy-storage for households reached grid-parity: storing PV energy with batteries became cheaper than the price from the public power network.

Will a 250 MW battery energy storage project be completed in Germany?

In October 2022, Fluence Energy and TransnetBW announced plans to develop a 250 MW battery energy storage (BES) as a transmission project in Germany. The Netzbooster project is expected to be completed in 2025. Such developments and government initiatives are likely to boost the demand for energy storage in the country during the forecast period.
