

Average portable ESS system price per 250MW in Poland

Will energy storage subsidy programs accelerate Poland's energy transition?

The development of energy storage subsidy programs in 2024-2025 has great potential. The planned activities will accelerate Poland's energy transition, supporting the development of technologies and the creation of new jobs in the energy sector. Energy storage subsidy programs are crucial to stabilizing Poland's electricity grid.

How will Polish energy sector evolve in 2025?

Innovation in the wind power and energy storage sector is expected to increase in 2025. The "Moja Elektrownia Wiatrowa" program plays an important role in the modernization of the Polish energy sector. It supports the development of energy storage, improves energy efficiency and increases the share of RES in the country's energy mix.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

Why is EV charging exclusion a problem in Poland?

This exclusion raises concerns about the program's budget utilization and the broader development of electromobility in Poland. Another pressing issue is the expansion of EV charging infrastructure, which remains insufficient to meet the rising demand from an increasing number of electric vehicles entering the market.

How much money will Poland receive from the modernization fund?

Funding for the program comes from the Modernization Fund (FM), which underscores the importance of the project for modernizing the energy system. By 2030, Poland could receive about 60 billion zlotys from the FM for energy transition goals. The call for applications runs from June 17, 2024 to June 16, 2025, or until funds are exhausted.

How much does Bess cost?

The cost of BESS has fallen significantly over the past decade, with more precipitous drops in recent years: This is nearly a 70% reduction in three years, owing to falling battery pack prices (now as low as \$60-70/kWh in China), increased deployment, and improved efficiency.
