

# Average residential ESS price per 30MW in Netherlands

How much does electricity cost in the Netherlands?

The residential electricity price in the Netherlands is EUR 0.228 per kWh or USD 0.266. The electricity price for businesses is EUR 0.190 kWh or USD 0.221. These retail prices were collected in December 2024 and include the cost of power, distribution and transmission, and all taxes and fees. Compare the Netherlands with 150 other countries.

Why are electricity prices rising in the Netherlands?

Yet, despite the country's commitment to clean energy, the cost of electricity in the Netherlands has become a source of concern for many residents. The reasons behind the rising prices are diverse, including investments in renewable energy, changes in energy market prices, and government regulations.

How does energy consumption vary in the Netherlands?

Understanding Consumption Patterns: If you come from a country with a different climate, your energy consumption in the Netherlands might vary, especially in terms of heating.

Do you pay VAT on energy bills in the Netherlands?

You are charged VAT on the entire energy bill, including energy tax. Your energy supplier remits the VAT you pay to the tax authorities. By comparing energy prices in the Netherlands, using energy-efficient appliances, and considering renewable energy sources, you can save money on your energy bills and contribute to a more sustainable future.

Which country in Europe has the most expensive electricity?

Netherlands is the country in Europe with the most expensive electricity. Finally, if we compare the price of electricity with taxes and without taxes, we see that, in the last period, households paid EUR 0.0314 of taxes for each kilowatt hour, which means that 6.61% of what households pay for the electricity are taxes.

How has green energy impacted the Netherlands?

This surge in green energy allowed the Netherlands to slash its coal usage (down 38% in 2023) and curb emissions from electricity generation by 22%. As of early 2024, the country had already achieved a new milestone: over 50% of electricity production came from renewables in the first half of the year.

The rise of power generation from weather-dependent renewables, combined with a major shift in demand towards increased electrification, leads to new challenges in continuously balancing demand and supply of electricity. An important direct ...
