

Average utility scale ESS price per 800kW in Spain

How much does electricity cost in Spain?

With the cost of electricity today in Spain it is 4.28 EUR cheaper to charge at the hours with the lowest price. What is a kWh? kWh stands for kilowatt-hour, and is a unit that tells how much energy is used in one hour. Kilo means a thousand. So for example, if you have a 1000 watt oven on for one hour, you have used 1 kilowatt-hour.

Does Spain need a Bess energy system?

Currently, Spain has 6.3GW of hydroelectric and 1GW of thermal storage capacity installed. In fact, the non-BESS storage capacity in Spain is higher than in any other European country. As a result, the need for BESS to integrate renewable energy sources into the electricity system is less immediate than in the UK, for example.

How much energy storage capacity does Spain have?

When it comes to installed energy storage capacity in general, Spain is one of the leading countries within Europe (see figure 2). Currently, Spain has 6.3GW of hydroelectric and 1GW of thermal storage capacity installed. In fact, the non-BESS storage capacity in Spain is higher than in any other European country.

How much energy storage will Spain have by 2030?

In its National Energy and Climate Plan (NECP), the Spanish government aims to have 22.5GW of energy storage by 2030 (see table 1). This amount of storage capacity will be needed to integrate the growing capacity of intermittent generation.

What is Spain's energy sector like?

Spain's energy sector is characterized by a significant shift towards renewable energy sources. The country has made substantial investments in wind and solar power, which now constitute a major portion of its electricity generation. This shift reflects Spain's commitment to reducing carbon emissions and promoting sustainable energy practices.
