

# Average wall mounted battery price per 3MW in Indonesia

Why is the battery market growing in Indonesia?

The battery market in Indonesia is witnessing robust growth, by factors such as the increasing demand for electric vehicles, the integration of renewable energy sources, and the expanding consumer electronics market. The government's support through incentives and favorable policies has created a conducive environment for market growth.

Why is battery storage important in Indonesia?

**Renewable Energy Integration:** With Indonesia's commitment to increasing renewable energy generation, battery storage systems are crucial for storing excess renewable energy and ensuring its smooth integration into the grid.

How much will a battery cost in 2030?

**Lower Battery Pack Costs:** Battery costs can fall to \$50-60/kWh by 2030, accompanied by the corresponding reduction in BESS capital costs. **Market Maturity & Competition:** Higher numbers of manufacturers in the market will drive down costs.

How much energy does a solar panel produce in Bali?

Remember, solar panels need direct sunlight to produce energy! In Bali, Lombok, and many parts of Indonesia, this translates to an average of 4.2 kWh (kilowatt-hour) per kW of solar installed. When there is cloud cover or rain, your power output will drop. At night, it won't produce any energy at all.

Why is energy storage important in Indonesia?

**Emergence of Energy Storage Systems:** The increasing integration of renewable energy sources into the grid and the need for reliable energy storage systems present significant opportunities for battery manufacturers and suppliers. **Rural Electrification:** Indonesia's vast rural areas still lack access to reliable electricity.

What is a 5MW battery energy storage system?

A 5MW battery energy storage system (BESS) pilot project has been launched by Indonesia's state-owned utility and battery manufacturer in an effort to transition away from diesel-generated electricity. The nation's state-owned utility, PLN, has joined forces with another state-owned organisation.

1) Total battery energy storage project costs average \$580k/MW. 68% of battery project costs range between \$400k/MW and \$700k/MW. When exclusively considering two-hour sites the median of battery project costs are \$650k/MW.

The largest price component, lithium ion battery price, will hold a decent amount of stability across installations in this sector - as long as you hit a minimum size. This minimum size, per industry experience,
