

Battery charger and solar charger on same terminal

Should I use a solar charger parallel to my solar installation?

If you use the charger in parallel to your solar installation, you may not harvest the maximum energy you could, but on the other side you will preserve your battery. So it's your choice: harvest more or get a longer battery life. You must log in or register to reply here.

What is the difference between a solar car battery charger & regular Charger?

Besides the obvious difference of the power source, the main difference between a solar car battery charger and a regular charger are that standard chargers are more commonly used to fully charge a dead battery.

Can I connect a second leisure battery to a solar charge controller?

While it's technically possible to connect a second leisure battery to the load terminal of a solar charge controller, it's generally not recommended. The main reason is the issue of charge profile mismatch. The load terminal follows the charge profile of the main battery connected to the controller's battery terminals.

Should I re-charge my solar battery at night?

You would probably be better off by re-charging your batteries during the night, if they fall below a given threshold. If you use the charger in parallel to your solar installation, you may not harvest the maximum energy you could, but on the other side you will preserve your battery. So it's your choice: harvest more or get a longer battery life.

Does a 12 volt solar panel have a load output terminal?

Power flows directly from the panels to a "grid-tied inverter" and then either to the household loads/appliances or the grid. There is no "load output terminal" in the traditional sense. While the load terminal can be useful in specific scenarios, it's not an essential feature for most 12 volt solar setups.

Why is my second battery not charging properly?

The main reason is the issue of charge profile mismatch. The load terminal follows the charge profile of the main battery connected to the controller's battery terminals. This means the second battery won't receive an optimal charging cycle tailored to its specific needs or chemistry.

4 100watt 12v Rich Solar panels 1 Weize 100Ah 12v LiFePo4 battery (planning to add 3 more in the future to have 400Ah total. 2/0 Battery to inverter wires 24" length and 2/0 Battery to Battery wires. 12" length and Finally, 1 12v rope ...
