

# Business energy storage cost breakdown in Ireland 2025

Does Ireland need an energy storage policy?

The Irish Government's Climate Action Plan 2021 set out the need for an energy storage policy for Ireland to support 75% reduction in power sector CO2 emissions by 2030. There are 10 key policy actions in the framework outlining the timings and key stakeholders involved in delivering them. Key points:

Is Ireland a game changer for long duration energy storage?

Ireland - A Game Changer for Long Duration Energy Storage? This is the first electricity storage policy published in Ireland. The Irish Government's Climate Action Plan 2021 set out the need for an energy storage policy for Ireland to support 75% reduction in power sector CO2 emissions by 2030.

Why should Ireland support energy storage?

By supporting energy storage Ireland can enable more renewable electricity on the grid, reduce our reliance on imported fossil fuels and our exposure to volatile gas commodity prices while significantly lowering our carbon emissions. November 2024

Which energy storage companies are working in Ireland?

Statkraft delivered the first energy storage project in Ireland with Fluence in 2020, at its Kilathmoy wind farm and the company has continued to have a strong presence in the Irish energy storage field since then. The company is also lining up another milestone project soon, with the country's first four-hour duration energy storage system.

What is Ireland's Electricity storage policy framework?

The policy framework is a first of kind policy, which clarifies the key role of electricity storage in Ireland's transition to an electricity-led system, supporting Ireland's 2030 climate targets, it may be considered as a steppingstone on Ireland's path to net zero carbon emissions.

How does Ireland's energy system affect the economy?

As it stands, Ireland's energy system remains exposed to geopolitical instability and fluctuations in the power market due to our import dependency for fossil fuels, which still accounts for over 80% of our energy consumption. As we saw during the energy crises, the effects on our economy, industry, and households can be severe.

While the energy storage pipeline in Ireland remains strong, it is unlikely to see a similar growth in built capacities until a few years from now. The potential cut-backs in DS3 tariffs may also pose risk in the development of this ...
