

China-europe air energy storage project

How big is China's energy storage capacity?

According to CNESA data, the capacity of independent energy storage stations planned or under construction in China in the first half of 2022 was 45.3GW, accounting for over 80% of all new energy storage projects planned or under construction.

What is a compressed air energy storage project?

A compressed air energy storage (CAES) project in Hubei, China, has come online, with 300MW/1,500MWh of capacity. The 5-hour duration project, called Hubei Yingchang, was built in two years with a total investment of CNY1.95 billion (US\$270 million) and uses abandoned salt mines in the Yingcheng area of Hubei, China's sixth-most populous province.

What does the EU & China Partnership do?

In energy, the partnership works on topics such as promoting energy efficient buildings, researching energy technologies, and finding ways to integrate renewable energy into urban areas. The EU and China share common interests and goals for the clean energy transition.

Who owns China Energy Engineering Corporation?

It is the largest grid-connected CAES project of its size in the world, engineering firm China Energy Engineering Corporation claimed in its announcement of the project (or specifically, the first in the world of that scale). The project is owned by China Energy Construction Digital Group and State Grid Hubei Integrated Energy Services Co.

Why are China's energy storage stations so low?

However, the scale of new independent energy storage stations put into operation in China in the first three quarters of 2022 was approximately 345.5MW, which was significantly lower than planned or under construction stations. The main reason for this may be that investors lack motivation.

How many electrochemical storage stations are there in China?

In terms of developments in China, 19 members of the National Power Safety Production Committee operated a total of 472 electrochemical storage stations as of the end of 2022, with a total stored energy of 14.1GWh, a year-on-year increase of 127%.
