

Is China's energy storage a good technology?

Reviewing of the existing research, reviews of China's energy storage have been studied by some scholars. As the most mature and widely used large-scale energy storage technology, the PSS become the focus of most research , , , .

Are China's Energy Storage Technology Standards perfect?

But the existing energy storage technology standards in China are not perfect, and a standardization system for the whole industry has not been established, let alone testing and approving products according to relevant standards .

Is energy storage a key innovation field in China?

In November 2014, the State Council of China issued the Strategic Action Plan for energy development (2014-2020), confirming energy storage as one of the 9 key innovation fields and 20 key innovation directions.

What is the energy storage demand in China?

Energy storage demand in China is without a doubt. Currently, China is carrying out the urbanization of centrality, intelligence, green and low carbon. Among them, the application of DG, smart micro-grid, EV, and the intelligent management of power grid all need energy storage , , , .

How can China improve the construction of energy storage technology standard system?

In the future, China should strengthen the construction of energy storage technology standard system from three aspects. First of all, quicken the pace of establishing basic standards and revising the existing standards. Technology standards, design specifications and other requirements are of the basic standards of energy storage technologies.

How big is China's energy storage capacity?

According to CNESA data, the capacity of independent energy storage stations planned or under construction in China in the first half of 2022 was 45.3GW, accounting for over 80% of all new energy storage projects planned or under construction.
