How much does a commercial battery energy storage system cost?

Average Installed Cost per kWh in 2025 In today's market, the installed cost of a commercial lithium battery energy storage system -- including the battery pack, Battery Management System (BMS), Power Conversion System (PCS), and installation -- typically ranges from: \$280 to \$580 per kWh for small to medium-sized commercial projects.

How much does energy storage cost?

Let's explore the costs of energy storage in more detail. Although energy storage systems seem attractive, their high costs prevent many businesses from purchasing and installing them. On average, a lithium ion battery system will cost approximately \$130/kWh.

What are the benefits of commercial power storage?

Some of the advantages of commercial power storage include: The benefits of installing battery storage at your facility can be great; however, one must evaluate the total cost of ownership of an energy storage system to determine if it's a good fit. Let's explore the costs of energy storage in more detail.

What are the different types of commercial energy storage?

Popular methods include pumped hydro storage, battery storage, and thermal energy storage. Each method has its advantages and disadvantages, and the choice often depends on the geographical, economic, and technical considerations of the end user. Are there other energy storage technologies besides LIBs?

There are a variety of other commercial and emerging energy storage technologies; as costs are characterized to the same degree as LIBs, they will be added to future editions of the ATB.

What are energy storage technologies?

Informing the viable application of electricity storage technologies, including batteries and pumped hydro storage, with the latest data and analysis on costs and performance. Energy storage technologies store energy either as electricity or heat/cold, so it can be used at a later time.
