

Commercial energy storage tender price in Germany 2030

Why is energy storage a growing trend in Germany?

Volatile energy prices and the popularity of photovoltaic self-use have driven demand for residential energy storage, which is expected to continue to grow through 2030. In addition, Germany plans to hold its first capacity market auction in 2028 to boost the development of large-scale energy storage projects.

Why do we need energy storage systems in Germany?

Increasing the share of renewables poses new challenges: Excess energy produced during off-peak hours needs to be stored and made available when needed. Since energy storage systems (ESS) can balance supply and demand, they are an essential part of Germany's energy transition. In line with this, the market for ESS is constantly growing.

How many residential energy storage systems are there in Germany?

By September 2023, Germany has installed more than 1 million residential energy storage systems and expects to add more than 400,000 units per year in the future. Volatile energy prices and the popularity of photovoltaic self-use have driven demand for residential energy storage, which is expected to continue to grow through 2030.

Where is energy traded in Germany?

Energy is traded at the European Energy Exchange (EEX) in Leipzig, Germany. Over 4000 firms participate in the German energy stock market. Certified market participants (only companies) can buy and sell electricity for determined time-windows.

Which country is promoting the development of residential energy storage?

In terms of residential energy storage, the Polish government has launched the MoJ PRD 5.0 subsidy program to encourage the development of residential energy storage. Sweden's installed battery storage capacity is expected to grow from 503 MW in 2023 to 3.8 GW in 2030, with high revenue levels in the ancillary services market driving the market growth.

Is battery storage a trend in Germany?

Remarkably, this share surged to 77% in 2023, indicating a significant upward trajectory of the trend toward combining PV residential rooftop systems with battery storage in Germany. To date, most battery storage systems in the German electricity system have been used exclusively to optimize self-consumption.
