

Csiro solar batteries

What is the CSIRO battery data dashboard based on?

This dashboard is based on voluntarily disclosed data for batteries that were installed at the same time as the solar PV system. Collection of grid-connected installations with disclosed battery data commenced in September 2014. At CSIRO, we solve the greatest challenges through innovative science and technology.

What is CSIRO UltraBattery™?

Accordingly, CSIRO Energy Technology has developed an advanced UltraBattery™ to replace the complex and high cost supercapacitor/lead-acid battery system. The UltraBattery™ is a hybrid energy-storage device, which combines a supercapacitor and a lead-acid battery in a unit cell, without extra, expensive, electronic control.

Is CSIRO a good partner for solar PV?

CSIRO is a lead partner of the Australian Solar Thermal Research Institute (ASTRI), an eight-year, \$87 million international research collaboration [...] Not too hot, not too cold. What's 'just right' for solar PV? You might think that solar panels would work best in summer, when there's more sunshine.

Why is CSIRO organising a photovoltaic Symposium?

CSIRO is supporting this symposium to catalyse discussion about the pathway for commercialisation of next generation photovoltaic technologies, and foster dialogue between colleagues and collaborators from a broad selection of institutions.

What can CSIRO do for You?

At CSIRO, we have been pursuing energy storage, including battery technologies, for more than 20 years. We are conducting significant research to overcome the challenges of intermittency, storage and dispatch of electricity generated from solar and wind energy.

Who are CSIRO & Cleantech Ventures?

CSIRO and Cleantech Ventures have also invested in technology start-up Ecoult Pty Ltd to develop and commercialise battery-based storage solutions. Ecoult battery technology aims to deliver a low-cost, high-performance, high-power, stationary energy storage solution suitable for grid-connected and remote applications.
