

# Domestic energy storage cost breakdown in Ukraine 2026

Why are Ukraine's energy reserves underdeveloped?

A combination of continuing policy uncertainty and ongoing disruptions have also constrained upstream energy production and discouraged sufficient, timely investment, particularly in the hydrocarbon sector. As a result, Ukraine's energy reserves remain underdeveloped, which will progressively reduce the sector's capacity to meet domestic demand.

Why should we invest in Ukraine's energy sector decarbonization?

Investing in Ukraine's energy sector decarbonization and developing clean energy projects emerges as a pivotal opportunity. These investment opportunities allow us to achieve a clean, environmentally sustainable energy landscape, significantly reducing emissions not only in Ukraine but also in Europe and globally.

Should Ukraine build a decentralized and diversified energy system?

The Ukrainian government (2023) recently declared that building a decentralized and diversified energy system--one that is more resilient against military attacks or natural disasters and can enhance energy security while facilitating the transition to renewable energy sources (RES)--will be a key priority.

How much damage has Ukraine done to the energy sector?

As of February 2023, the Government of Ukraine, the World Bank, the European Union (EU), and the United Nations estimated damage to the energy sector to be above 10 billion U.S. dollars (without accounting for Russia's destruction of the Kakhovka Hydroelectric Power Plant).

How much money does Ukraine need to invest in energy?

Volodymyr Kudrytskyi, Chairman of the Board of Ukrenergo, has noted that Ukraine will need to invest around USD 15 billion to increase the capacity and flexibility of its energy system in the coming years.

Is energy access a problem in Ukraine?

Maintaining access to reliable and affordable energy services is likely to become increasingly problematic in these circumstances. Ukraine's energy use is concentrated in the residential, industry and transport sectors, which were responsible for over 80% of total final energy consumption in 2019.
