

# Domestic energy storage installed capacity in 2022

How many GW of non-hydropower storage are there in 2022?

A record 4.8 GW of utility-scale non-hydropower storage was established in the U.S. in 2022, bringing total capacity to 11.4 GW, according to Sustainable Energy in America 2023 Factbook released Thursday by BloombergNEF and the Business Council for Sustainable Energy. That's up from a previous record build of 3.7 GW in 2021.

How many GW will the US storage market install in 2022?

"Despite a slow fourth quarter, total 2022 installations were still 44% over 2021. Grid-scale installations increased by 7% year-over-year, CCI by 3%, and residential experienced the strongest growth with installations up 36%. Looking ahead, we expect the U.S. storage market to install almost 75 GW between 2023 and 2027.

Will battery energy storage capacity double by 2022?

According to the U.S. Energy Information Agency, utility-scale battery energy storage capacity in the U.S. could more than double by 2022. Lior Handelsman, founder of SolarEdge Technologies, a Israel-based energy storage and solar company, recently told Inframation that interest in commercial storage has increased tenfold in just a year.

How many megawatts did energy storage add in Q4 2022?

According to the latest U.S. Energy Storage Monitor report, the market added 1,067 megawatts across all segments in the fourth quarter of 2022, making the quarter only the fifth highest for installations - 33% lower than Q4 of 2021, which is the highest on record.

How did the residential storage segment perform in Q3 2022?

However, the residential storage segment increased by 11% over Q3 and broke another record with 171 MW installed, ousting Q3 2022 by 17 MW. Capacity installations increased for this segment every quarter in 2022, confirming sustained demand for residential back-up power and resiliency.

How much energy storage will Wood Mackenzie have in 2023?

Grid-scale installations account for approximately 60 GW, 81% of the new capacity added," said Vanessa Witte, senior analyst with Wood Mackenzie's energy storage team. Forecasted capacity for the grid-scale and CCI segments will more than double in 2023, partly due to robust storage demand and to projects that were delayed from 2022 coming online.
