

# Energy storage 30 trillion

How big will battery storage be by 2030?

Although pumped,thermal and electro-mechanical storage will continue to expand - set to register 241.7GW,90.14GW and 30.19GW by 2030,respectively - the trajectory to surpassing 1.5TW owes largely to the projected exponential growth of battery storage,which is expected to register 1.2TWby 2030.

How many kWh can a home energy system store?

The system is available in two versions which have a capacity of 10.6 kWh and 17.7 kWh,and is scalable to a maximum capacity of 35.4 kWh. The company claims that this configuration would allow for around 20 hours of storage,estimating that the average daily home energy appliance usage in the United States is about 30 kWh.

What types of energy storage are included?

Other storage includes compressed air energy storage,flywheel and thermal storage. Hydrogen electrolyzers are not included. Global installed energy storage capacity by scenario,2023 and 2030 - Chart and data by the International Energy Agency.
