

# Energy storage science and engineering of mining university

What is UNSW School of Minerals & Energy Resources Engineering?

UNSW School of Minerals & Energy Resources Engineering is a leading provider of education & research; solving complex problems facing local & global industries.

Is UNSW a good school for mining engineering?

Join a leading global school in mining engineering education and research. The UNSW School of Minerals and Energy Resources Engineering (MERE) ranks #1 in Australia and #2 globally for Mineral and Mining Engineering, and #2 in Australia and #10 globally for Petroleum Engineering (QS World University Rankings by Subject, 2025).

Why do engineers work in mining?

Engineers have unique skills to identify sources of energy or resources that can be used in various ways to meet the needs of society. Mining resources helps us generate a range of energy sources, including renewable energy.

What is mining engineering?

Mining Engineering is responsible for extracting essential minerals and geological materials from the Earth, many of which are used to develop the technologies needed to support the industries working toward environmental sustainability.

What can you do with a degree in energy & resources?

Energy, resources and geostorage engineering graduates are prepared to work across a variety of jobs, all vital to our planet's future. This includes industries that focus on reducing carbon emissions and transitioning to renewable energy sources.

What are the different types of energy resources engineering courses?

Course work includes the fundamentals of chemistry, computer science, engineering, geology, geophysics, mathematics, and physics. Applied courses cover aspects of energy resources engineering in fields like oil and gas recovery, geothermal engineering, carbon sequestration, clean coal and renewable energy.
