What is a battery energy storage system?

A Battery Energy Storage System (BESS) is a technology designed to store and manage energy for later use. It typically uses rechargeable batteries to store energy from various sources, such as the electrical grid, renewable energy sources like solar or wind power, or other power generation methods. Some benefits of a BESS include:

Does SDG&E have battery storage?

Following the expansion, SDG&E's Westside Canal complex will feature 231 MW of energy storage and will be the largest asset in SDG&E's utility-owned battery storage portfolio.

How do I contact San Diego's Battery energy storage systems project?

General Inquiries: Planning & Development Services PDS.LongRangePlanning@sdcounty.ca.gov |(858) 505-6677 Learn more about the County of San Diego's Battery Energy Storage Systems Project.

How many megawatts will a new energy storage facility add?

This expansion project will add 100 megawatts (MW) of energy storage capacity to the existing 131 MW facility and is projected to be fully operational by June 2025.

Where are SDG&E battery systems installed?

Typically, these battery systems and microgrids are installed on SDG&E-owned property; they are adjacent to our existing substation facilities or in critical locations where grid reliability and resiliency is needed most.

How does SDG&E work?

SDG&E will work to minimize impacts such as noise and dust from construction activities to the extent possible. Construction may take place in phases. Sometimes planned outages may occur due to the nature of this work, and customers will be promptly notified.
