

# Energy storage station location and capacity

How many energy storage systems are there in New York City?

Con Edison has said it is working to promote the efficient operation of 1,000 MW of energy storage in the New York metropolitan region by 2030. The company reported there were 493 customer-owned BESSs installed in New York City and Westchester, a county north of the city, as of March 2023. The total capacity of those systems was about 25 MW.

What types of energy storage are included?

Other storage includes compressed air energy storage, flywheel and thermal storage. Hydrogen electrolyzers are not included. Global installed energy storage capacity by scenario, 2023 and 2030 - Chart and data by the International Energy Agency.

What is New York state's energy storage plan?

New York State aims to reach 1,500 MW of energy storage by 2025 and 6,000 MW by 2030. Energy storage is essential for creating a cleaner, more efficient, and resilient electric grid. Additionally, these projects will provide meaningful benefits to Disadvantaged Communities and Low-to-Moderate Income New Yorkers.

How can energy storage support the global transition to clean electricity?

To support the global transition to clean electricity, funding for development of energy storage projects is required. Pumped hydro, batteries, hydrogen, and thermal storage are a few of the technologies currently in the spotlight.

What type of energy storage is used in the world?

Most of the world's grid energy storage by capacity is in the form of pumped-storage hydroelectricity, which is covered in List of pumped-storage hydroelectric power stations. This article lists plants using all other forms of energy storage.

How many energy storage tanks are there?

The university placed three separate orders for energy storage tanks and they were added to two of their three existing central plants in 2004, 2006 and 2007. There are 205 tanks in total at the two plants.
