

Can large-scale battery energy storage systems participate in system frequency regulation?

In the end, a control framework for large-scale battery energy storage systems jointly with thermal power units to participate in system frequency regulation is constructed, and the proposed frequency regulation strategy is studied and analyzed in the EPRI-36 node model.

How does energy storage improve frequency regulation performance?

By actively involving of energy storage, the strategy also helps to decrease the system's frequency regulation deviation. This results in a reduction of 2699.458 MW in frequency regulation loss and a decrease of 41.18 % in frequency regulation deviation. As a result, the overall frequency regulation performance of the system is improved.

Are battery frequency regulation strategies effective?

The results of the study show that the proposed battery frequency regulation control strategies can quickly respond to system frequency changes at the beginning of grid system frequency fluctuations, which improves the stability of the new power system frequency including battery energy storage.

What is frequency regulation power optimization?

The frequency regulation power optimization framework for multiple resources is proposed. The cost, revenue, and performance indicators of hybrid energy storage during the regulation process are analyzed. The comprehensive efficiency evaluation system of energy storage by evaluating and weighing methods is established.

Can energy storage support the frequency regulation of thermal power units?

Comprehensive evaluation index performance table. Therefore, in the current rapidly developing new energy landscape where conventional frequency regulation resources are insufficient, the proposed strategy allows for more economical and efficient utilization of energy storage to support the frequency regulation of thermal power units.

How to improve the frequency regulation capacity of thermal power units?

In order to enhance the frequency regulation capacity of thermal power units and reduce the associated costs, multi-constrained optimal control of energy storage combined thermal power participating in frequency regulation based on life loss model of energy storage has been proposed. The conclusions are as follows:

# Energy storage system frequency regulation accuracy
