

How important is utility-scale energy storage in Europe?

Among these, utility-scale ESS installations accounted for 2GW, representing 44% of the total power. EASE predicts that in 2023, new European energy storage installations will surpass 6GW, with utility-scale ESS installations expected to be at least 3.5GW. This points to the growing significance of utility-scale energy storage in Europe.

Are European energy storage systems on the rise?

Europe's utility-scale energy storage systems (ESS) are on the rise, boasting a robust revenue model. The European large storage market is starting to shape up. According to data from the European Energy Storage Association (EASE), new energy storage installations in Europe reached approximately 4.5GW in 2022.

Which country has the highest energy storage capacity in Europe?

The UK stands at the forefront of the European large storage market, boasting impressive growth in installed capacity and a wealth of project reserves. According to EASE data for 2022, the UK witnessed the highest installations of utility-scale energy storage, reaching 830MWh, a notable achievement that surpassed all others in Europe.

What is the European energy storage inventory?

In March 2025, the Commission launched the European Energy Storage Inventory, a real-time dashboard that displays energy storage levels across different European countries. It is the first European-level tool of its kind and offers energy storage data across a full range of technologies.

Which energy storage technology is the most popular in Europe?

Pumped hydro is the most widely used technology for energy storage in Europe and worldwide, but batteries and hydrogen have come into the spotlight over the last decade as a recent trend in the energy storage market.

Is the home storage market growing in Europe?

The market for home storage is growing at a record pace across Europe. For example, in its latest market study for residential energy storage, SolarPower Europe calculates an increase in storage capacity of 71% (3.9 GWh) in the most likely scenario for the past year.
