

Expected ROI of BESS project in Ireland 2030

Will Ireland see a battery energy storage boom in 2030?

The Single Electricity Market (SEM) in Ireland is set to see a battery energy storage system (BESS) boom into 2030, with short-to-medium duration capacity forecast by Cornwall Insight to increase fivefold by 2030.

What challenges does Ireland's Bess market face?

According to Bobby Smith, head of Energy Storage Ireland (ESI), one of the main obstacles Ireland's BESS market faces is the lack of route to market for battery operators. "A lot of energy storage has crept under the radar so far in Ireland," he told ESS News. Developers secure planning quite easily but the route to market is a challenge.

Will Bess be the dominant energy storage technology in GB in 2025?

By the end of 2025, the installed capacity of BESS in GB could exceed other forms of storage (such as pumped hydro), making BESS the dominant storage technology. Publically traded energy storage funds in GB

How good is Ireland's energy storage strategy?

Smith pointed out that Ireland's energy storage strategy, published in 2024, was "quite positive." A lot of high-level plans and a technology agnostic outlook. "Unfortunately, we haven't seen a lot of progress on those actions which is a problem we are trying to address," said Smith.

Can energy storage be decarbonised in Ireland?

A critical point has been reached in the deployment of energy storage in Ireland. Power system development plans forecast that to achieve decarbonisation of the power system a large increase in the volume of ESS is required to assist in integrating the necessary volumes of variable renewable energy (VRE).

How much will a battery based ESS cost in 2030?

According to International Renewable Energy Agency (IRENA), it is estimated that by 2030, the total installed cost may decrease between 50% and 60%, the battery cell cost may be reduced tremendously, and it is estimated that a Li-ion battery based installed ESS cost may fall below USD 200/kWh for such stationary application.

This report provides an outlook on battery energy storage system (BESS) buildout in Great Britain (GB) until the end of 2024. We have taken a bottom-up approach, building a list of projects by taking into consideration multiple data sources. ...
