

# Expected ROI of battery storage container project in Sweden 2030

How many large-scale battery storage facilities are there in Sweden?

This initiative represents the deployment of 14 large-scale battery storage facilities with a total capacity of 211MW/211MWh - a historic investment and milestone in Sweden's transition towards a fossil-free energy system here and now.

Why should you invest in BESS batteries in Sweden?

BESS investments in Sweden thrive when operators adopt a comprehensive approach to leveraging market opportunities. Batteries excel in their versatility, offering operators the ability to trade across multiple markets, including intraday, day-ahead, FCR-D, FCR-N, FFR, aFFR and mFRR.

Are battery energy storage systems a good investment?

Since the rapid decline of the FCR-D market in Sweden earlier this year, doubts have arisen about the profitability of investing in battery energy storage systems (BESS). However, the data clearly demonstrates that BESS remain a sound and resilient investment.

Is a large-scale battery storage solution a viable solution?

Flexibility solutions, such as large-scale battery storage, have proven to be both a cost-effective and scalable solution. It reduces societal costs while creating opportunities for industrial development and electrification, which is essential for Sweden's future competitiveness and the green transition.

How do infra funds help wind and solar projects in Sweden?

Infra funds like GreenVoltis play a key role in providing structured financing to improve project bankability and long-term profitability. An increasing number of wind and solar developers in Sweden are expanding into BESS project development, but grid constraints remain a significant hurdle. Limited grid connection capacity is slowing deployment.

Is battery storage proving its value?

Battery storage is proving its value, but developers need better financing, optimized operations, and stronger cybersecurity to scale successfully. At GreenVoltis, we're working directly with developers and businesses to address these issues - through financing, smart grid solutions, and secure energy management.

Thus, projected total system costs decrease more quickly for longer-duration battery storage than shorter-duration battery storage. However, the duration is not captured in the BNEF cost projections, which only project a 4-hour system.

Which major battery projects are currently in testing and expected to reach commercial operation in 2025. How CAISO's Resource Adequacy market is shaping battery investment and financing decisions. To get full
