

Expected ROI of lithium ion storage project in Greenland 2025

Will 2025 be a pivotal year for Lithium Exploration in Greenland?

With clear exploration and mining laws in place, highly prospective geology, and extensive outcrop exposure, 2025 is poised to be a pivotal year for lithium exploration in Greenland as BRW embarks on one of the most ambitious regional exploration initiatives in the country's history.

Why is Greenland a key supplier of lithium?

With its vast, untapped mineral potential and geographic position, Greenland deserves to be at the forefront of resource development, positioning itself as a key provider of lithium for European and North American Markets.

Are lithium-ion batteries the future of energy storage?

While lithium-ion batteries have dominated the energy storage landscape, there is a growing interest in exploring alternative battery technologies that offer improved performance, safety, and sustainability.

What is the future of lithium ion batteries?

Recent advancements enable 80% recharge in under 30 min, enhancing usability in transportation and consumer applications. The demand for lithium-ion batteries is rapidly expanding, particularly in EVs and grid energy storage. Improved recycling processes and alternative materials are critical for minimizing environmental impact.

Does Greenland have a potential for lithium mineralisation?

Following a highly successful inaugural field season in the summer of 2024, BRW announced the country's first-ever hard rock lithium discovery near Nuuk, the country's capital, confirming BRW's thesis that Greenland holds significant potential for lithium mineralisation.

Can Greenland supply lithium to Europe?

While Canada's lithium deposits will play a crucial role in supplying the North American market, they alone will not be sufficient to meet the growing demand in Europe. Given its strategic proximity to Europe, vast landmass, and low population density, Greenland has the potential to emerge as a key supplier of lithium for European markets.

In 2024, global demand for lithium-ion batteries in energy storage is expected to reach 256.41 GWh, and this will rise to 355.22 GWh in 2025 and 463.23 GWh in 2026. Inventory Trends Lithium carbonate inventories began to climb at the ...

While the U.S. battery storage capacity is expected to increase this year, the industry could suffer from the imposition of tariffs on imports by the Trump administration, as the U.S. is still heavily reliant on China for its
