

# Expected ROI of warehouse solar storage project in

Why do warehouses use solar energy?

This aligns with California's WAIRE Program, which incentivizes warehouses to adopt solar energy to reduce emissions and earn compliance points. Solar energy helps warehouses slash their electricity bills by generating clean power onsite. Many facilities report savings of 20-40% on their energy costs.

Are warehouses a good candidate for solar energy adoption?

Coupled with their large, flat rooftops that are perfect for solar panel installations, warehouses are prime candidates for solar energy adoption. According to the Solar Means Business 2024 Report, the logistics and transportation sector is one of the fastest-growing adopters of solar energy.

Are warehouses transforming into sustainability leaders?

Warehouses are transforming into sustainability leaders with the adoption of solar energy. From cutting energy costs by 20-40% to aligning with WAIRE compliance, solar is a game-changer for the logistics sector. Learn how your facility can capitalize on this clean energy revolution and drive operational efficiency.

Why do warehouse and logistics companies need a solar PV system?

A combination of increasing energy prices, the drive to net zero and the prospect of heat and transport electrification means there is a strong need for low cost, low carbon and reliable electricity in the warehouse and logistics industry. Solar PV UK rollout expanded significantly in the early 2010's due to generous feed-in tariff support.

Why should warehousing invest in a rooftop solar PV system?

Rooftop solar PV provides, lower and secure electricity costs, reduced environmental impact, no additional land use and increased asset value and efficiency. UK warehousing has the roof space for up to 15GW of new solar, which would double the UK's solar PV capacity.

Are solar-powered warehouses a good idea?

Solar-powered warehouses provide a competitive edge, showcasing a commitment to sustainability. The rise of electric trucks and yard vehicles requires warehouses to invest in EV charging infrastructure. Solar energy can offset the energy demands of these charging stations, making electrification more cost-effective.
