

# Expected ROI of wind solar storage project in Canada 2025

How has Canada's solar energy capacity changed over the past 5 years?

Canada's total wind, solar and storage installed capacity grew 46% in the past 5 years (2019-2024), including nearly 5 GW of new wind, 2 GW of new utility-scale solar, 600 MW of new on-site solar, and 200 MW of new energy storage. Canada's solar energy capacity (utility-scale and onsite) grew 92% in the past 5 years (2019-2024).

How many solar energy projects are there in Canada?

Canada now has 217 major solar energy projects producing power across the country. There are now nearly 96,000 onsite solar energy installations across Canada. For more facts at a glance, see CanREA's "By the Numbers" webpage. Canada continues to demonstrate strong potential in renewable energy infrastructure.

How many MW of wind & solar will Canada connect by 2030?

In total, Canadian jurisdictions can expect to connect at least 10,000 MW of new wind, solar and storage by the start of 2030, according to CanREA's Clean Energy Procurement Calendar.

How much solar energy does Canada need?

Overall, Canada met 6.5% of its energy demand with wind and solar. CanREA states that Canada has a goal of commissioning 1,000 MW of new solar energy for 2022 with 18 new projects, 16 anticipated to be in Alberta.

What is the future of solar energy in 2025?

In 2025, several innovations are expected to shape the future of solar energy. These changes will make solar more accessible and reliable for homeowners and businesses. Some of the biggest advancements include: Traditional solar panels have improved, but newer models are reaching even higher efficiency levels.

How can Ontario encourage solar energy adoption?

Ontario has introduced programs to encourage solar energy adoption. Net metering policies allow homeowners and businesses to give some of their power back to the grid for credits on their electricity bills. Grants and rebates help offset the cost of solar panel installation.

Nine wind energy projects approved in British Columbia will boost the power grid by 8%, generating 5,000 gigawatt-hours annually, equivalent to the consumption of 500,000 homes. Eight of these projects include 51% Indigenous ownership.
