

# Factory solar storage cost vs benefit calculation in Kuwait

Should we implement PV solar system in Kuwait?

Furthermore, it will mitigate the image of oil exporting countries excessive and irrational consumption of fossil fuel. Hence, based on this preliminary analysis the study recommends the implementation of PV solar system in Kuwait in order to diversify sources of energy.

Is solar energy feasible in Kuwait?

It was found that the positive characteristics of solar radiation in Kuwait play a critical role in enhancing the feasibility of implementing solar systems. Under the present price of 5\$/W and 15% efficiency, the LCOE of a 1 MW station is estimated to be around \$0.20/kWh. This LCOE can be feasible only when the cost of oil is around 100\$/barrel.

How can photovoltaic & concentrate solar power help Kuwait?

Recognizing both the environmental and climatic hazards to be faced in the coming decades and the continued depletion of the world's most valuable fossil energy resources, Photovoltaic (PV) and Concentrate Solar Power (CSP) can provide critical solutions to electricity supply in Kuwait within relatively short time frame.

How can a PV solar system save money?

The savings in terms of energy resourced (oil) can be either sold in the global energy market for higher returns, or be saved for future generation. The opportunity cost of using fossil fuel in producing electricity should be accounted for in order to determine the economic profit of PV solar systems.

Are solar power plants available in Kuwait?

In order to evaluate the provision of solar power plants in Kuwait, techno-economic analysis has been performed for photovoltaic (PV) and concentrated solar (CSP) power plants with a capacity of 100 MW. The optimal location for the power plants is determined to be Al-Wafra in Kuwait.

What are the environmental benefits of solar energy systems?

The most important environmental benefit resulting from the installation and operation of solar energy systems is the reduction in pollutant emissions. Energy used in the power plants to produce electricity is a major part of the pollution cycle.
