

Fire protection procedures for energy storage projects

Are energy storage systems a fire hazard?

However, like any electrical infrastructure, energy storage systems come with their own set of risks, particularly fire hazards. This is where the National Fire Protection Association (NFPA) 855 comes in. NFPA 855 is a standard that addresses the safety of energy storage systems with a particular focus on fire protection and prevention.

What is battery energy storage fire prevention & mitigation?

In 2019, EPRI began the Battery Energy Storage Fire Prevention and Mitigation - Phase I research project, convened a group of experts, and conducted a series of energy storage site surveys and industry workshops to identify critical research and development (R&D) needs regarding battery safety.

How to protect battery energy storage stations from fire?

High-quality fire extinguishing agents and effective fire extinguishing strategies are the main means and necessary measures to suppress disasters in the design of battery energy storage stations. Traditional fire extinguishing methods include isolation, asphyxiation, cooling, and chemical suppression.

How much protection do energy storage systems offer?

Up to 10% Protection. As the demand for clean, renewable energy continues to grow, energy storage systems (ESS) have become a critical component in ensuring a reliable and sustainable energy future.

Does NFPA 855 protect energy storage systems?

As energy storage systems become increasingly integral to the energy grid, it's essential that fire safety remains a top priority. NFPA 855 provides a comprehensive framework for ensuring that these systems are designed, installed, and operated safely to minimize fire risks.

What's new in energy storage safety?

Since the publication of the first Energy Storage Safety Strategic Plan in 2014, there have been introductions of new technologies, new use cases, and new codes, standards, regulations, and testing methods. Additionally, failures in deployed energy storage systems (ESS) have led to new emergency response best practices.
