

# Gel battery storage cost breakdown in Czech 2030

How will a collaborative approach affect battery storage costs?

This collaborative approach has accelerated manufacturing improvements and cost reductions. Current projections indicate that utility-scale battery storage costs will continue to decrease by 8-10% annually through 2030, driven by increased production volumes and ongoing technological innovations.

When will battery cost projections be updated?

In 2019, battery cost projections were updated based on publications that focused on utility-scale battery systems (Cole and Frazier 2019), with updates published in 2020 (Cole and Frazier 2020) and 2021 (Cole, Frazier, and Augustine 2021). There was no update published in 2022.

Do projected cost reductions for battery storage vary over time?

The suite of publications demonstrates wide variation in projected cost reductions for battery storage over time. Figure ES-1 shows the suite of projected cost reductions (on a normalized basis) collected from the literature (shown in gray) as well as the low, mid, and high cost projections developed in this work (shown in black).

The costs presented here (and for distributed commercial storage and utility-scale storage) are based on this work. This work incorporates current battery costs and breakdown from the Feldman 2021 report (Feldman et al., 2021) that works ...

Therefore, to account for storage costs as a function of storage duration, we apply the BNEF battery cost reduction projections to the energy (battery) portion of the 4-hour storage and use the Cole and Frazier summary for the remaining ...

**Projected Utility-Scale BESS Costs:** Future cost projections for utility-scale BESS are based on a synthesis of cost projections for 4-hour duration systems as described by (Cole and Karmakar, 2023). The share of energy and power ...
