Will China impose a 145% tariff on lithium-ion batteries in 2025?

In 2025, US lithium-ion battery buyers face an unprecedented challenge: a sweeping 145% tariff on cells imported from China. As solar installers, EV manufacturers, and data-center operators wrestle with skyrocketing costs, finding reliable, cost-effective sources has never been more critical.

What are battery cost projections for 4 hour lithium-ion systems?

Battery cost projections for 4-hour lithium-ion systems, with values normalized relative to 2022. The high, mid, and low cost projections developed in this work are shown as bolded lines. Figure ES-2.

How does China's Lithium battery policy affect us landed cost?

Recent policy changes have imposed duties of 54% on such cells, affecting their landed cost in the U.S. market. Data shows that Chinese lithium battery exports to the U.S. totaled \$1.9 billion in December 2024 alone.

Is China still a supplier of lithium battery cells?

China remains a primary supplier of lithium battery cells for the U.S. market. In December 2024, lithium battery imports from China exceeded \$1.9 billion, according to U.S. trade records. However, changes under the 2025 tariff framework have added new barriers to this trade.

What are China's new tariffs on lithium-ion cells & components?

Starting in 2025, new Chinese tariffs on imported lithium-ion cells and components--especially those used in energy storage systems--have reached levels as high as 104%, according to updated trade filings. This marks a significant increase compared to the average 20.8% rate recorded in 2024.

What are the new tariffs on lithium chemistries?

Current U.S. policies apply a 54% base tariff on key lithium chemistries, including LFP (lithium iron phosphate) and NMC (nickel manganese cobalt) cells. These China tariffs apply across multiple applications, from residential storage systems to EV modules. In addition to higher duties, other changes include:

Cars remain the primary driver of EV battery demand, accounting for about 75% in the APS in 2035, albeit down from 90% in 2023, as battery demand from other EVs grows very quickly. In the STEPS, battery demand for EVs other than cars ...
