

# Haiti household energy storage power supply spot production

What kind of energy does Haiti use?

Haiti relies on a mix of imported oil and domestic biofuels such as wood and sugar cane for its total energy supply. As of 2020, more than 90% of electrical generation in Haiti was derived from fossil fuels and less than 10% from renewables.

Why are electricity rates so high in Haiti?

Electricity rates in Haiti are higher than the average in the region due to EDH's inability to provide reliable, centrally-supplied power. This lack of reliable power continues to drive demand for alternative power solutions, such as new electrical power systems, generators, inverters, solar panels, and batteries, as well as their maintenance.

What are Haiti's potential power generating sites?

The Haitian government prioritizes the procurement of fuel to reliably supply turbines. There are plans for 10MW facilities in Port-de-Paix and Jacmel and a 5MW array in Jeremie. Grand'Anse and Nippes Departments in the southern region were also targeted for smaller power generating facilities.

What is the solar power plant capacity in Haiti?

The solar power plant in Haiti has a capacity of 1.2 MWp. It is located in the Commune of Jacmel, South-East Department, and is connected to the regional electricity network of Jacmel.

What challenges does Haiti face in generating and distributing electricity?

Haiti faces significant challenges in generating and distributing electricity reliably. The lack of access to affordable and reliable power significantly hinders investment and business development. The majority of electricity is produced using imported fossil fuels.

Is biomass a source of electricity in Haiti?

Traditional biomass - the burning of charcoal, crop waste, and other organic matter - is not included. This can be an important source in lower-income settings. Haiti: How much of the country's electricity comes from nuclear power? Nuclear power - alongside renewables - is a low-carbon source of electricity.
