Does Ghana have a long-term energy plan?

Ghana's previous long-term energy plan, the Strategic National Energy Plan (2006-2020), was not successfully implemented, leading to power crises. The drafting of the IPSMP was more inclusive of interested parties, used a more robust methodology, and received support from partners like the World Bank and USAID.

How can Ghana improve energy security?

o Indigenous resources (hydropower, renewables, and natural gas) are the least-cost option over the entire planning period to improve energy security, and allow gradual grid integration of solar and wind. ? Renewable Energy. Ghana has a goal of 10% renewable generation by 2030.

How much energy does Ghana use?

According to Ghana's Energy Commission, final energy consumption increased by 4.3% in 2019. Peak electricity demand for 2019 was 2804 MW, well under Ghana's total installed capacity of 5,172 MW. Installed capacity is dominated by thermal (68%), followed by hydro (31%), and marginal renewables (0.82%) (Figure 1).

What are the main sources of energy in Ghana?

Installed capacity is dominated by thermal (68%), followed by hydro (31%), and marginal renewables (0.82%) (Figure 1). Ghana's thermal dependency is due to high demand, unpredictable water levels in domestic dams, discovery of indigenous oil and gas, and the introduction of the West African Gas Pipeline.
