

# How to use solar energy without batteries

Can you use solar panels without battery storage?

If battery storage isn't in the cards for now, don't worry! You can still use your solar panels to power your home without battery storage. In fact, a majority of home solar systems aren't connected to battery storage. Here's how it works: Early morning and evening are times with lower solar production, but higher energy needs.

How does a solar system work without battery storage?

Without battery storage, solar systems typically use the utility grid as a battery. Solar energy is first used to directly power your home and the excess energy is pushed onto the local grid to power neighboring systems. When the solar system is underproducing, the home draws electricity from the local grid.

Can you use solar power without a battery?

Another application for solar power systems without a battery is a well pump. You can use these pumps for several purposes: In both cases, the solar panels are connected to a controller. Depending on the type of controller, you can set the timing or install a switch to turn the pump on manually.

Do home solar systems need battery storage?

In fact, a majority of home solar systems aren't connected to battery storage. Here's how it works: Early morning and evening are times with lower solar production, but higher energy needs. During these times (and especially at night) solar owners without battery storage draw power from the grid, which acts as a giant energy backup system.

Do you need a solar battery bank?

You essentially use the local utility grid as a battery to "store energy" without needing a solar battery bank in your home. If you have your own battery storage, you likely won't transfer much energy to or from the grid. You store your own energy and pull from that, and the grid serves as a backup to the backup.

Can you have a battery backup with solar panels?

The short answer is, yes you can. Although there are several advantages to having a solar battery backup, it's not essential for everyone. In this article, we'll explore some scenarios in which having battery storage with solar panels is beneficial, and some in which sticking with simple rooftop solar panels could be the way to go. Did you know?
