

How to view switch energy storage

What information does a storage Switch display?

Displays information only about the storage switches that have the ports with the peer information values you specify. Displays information only about the storage switches that match the switch connectivity data last successful refresh timestamp you specify.

How do I display detailed profile information about a storage switch?

To display detailed profile information about a single storage switch, use the `-switch-name` parameter. {
[-fields <fieldname>,...] Displays the specified fields for all the storage switches, in column style output.
Displays the errors related to the storage switch. Displays expanded information about all the storage switches in the system.

What is energy storage & how does it work?

Energy storage supports diverse applications including firming renewable production, stabilizing the electrical grid, controlling energy flow, optimizing asset operation and creating new revenue by delivering: Monetize assets through new revenue streams, increased asset utilization, improved yield, and reduced operating costs.

Why is energy storage important?

Energy storage is essential for creating a cleaner, more efficient, and resilient electric grid. Additionally, these projects will provide meaningful benefits to Disadvantaged Communities and Low-to-Moderate Income New Yorkers. Energy storage is essential to a resilient grid and clean energy system.

What is a storage switch show command?

The storage switch show command displays information about all the storage switches in the MetroCluster configuration. The back-end switches must have been previously added for monitoring using the storage switch add command. If no parameters are specified, the default command displays the following information about the storage switches:

Should energy storage be included in the electric grid?

Integrating storage in the electric grid, especially in areas with high energy demand, will allow clean energy to be available when and where it is most needed. As New York continues to invest and build a cleaner grid, energy storage will allow us to use existing resources more efficiently and phase out the dirtiest power plants.
