

# Industrial battery cabinet cost breakdown in Poland 2030

How many MW rated energy storage systems are there in Poland?

The capacity obligations for these projects ranged from 1.2 MW to 153 MW rated power, with an average capacity of around 30 MW. The decision to reduce the de-rating factor for energy storage systems in the last capacity market auction in Poland from 95 percent to 61 percent did not prove detrimental to the market.

How will a collaborative approach affect battery storage costs?

This collaborative approach has accelerated manufacturing improvements and cost reductions. Current projections indicate that utility-scale battery storage costs will continue to decrease by 8-10% annually through 2030, driven by increased production volumes and ongoing technological innovations.

How many GW is secured by new generation capacity market units?

As a result, the total capacity obligations secured exceed 8 GW, with over 1.5 GW attributed to contracts with foreign entities. Approximately 2.5 GW was secured by "new generation capacity market units". This designation, exclusively applied to Li-ion energy storage projects in previous auctions, i.e. to BESS.

The 2021 ATB represents cost and performance for battery storage across a range of durations (1-8 hours). It represents lithium-ion batteries only at this time. There are a variety of other commercial and emerging energy storage ...

In this way, the cost projections capture the rapid projected decline in battery costs and account for component costs decreasing at different rates in the future. Figure 3 shows the resulting utility-scale BESS future cost projections for the ...
