

# Is it worth getting a battery with solar

Are solar batteries worth it?

Overall, batteries are worth it for homeowners who want a backup power source, who don't have full-retail net metering, or who live somewhere with substantial battery rebates and incentives. The best way to see if solar storage is right for you is by getting quotes from local solar installers.

Can solar batteries save you money?

Solar batteries can also save you money on utility power long-term. When utility costs are at their peak, you can pivot your home's energy consumption to run off of battery power rather than grid power, leveraging the electricity your solar panels generated when you need it most.

Why do solar batteries cost so much?

The high up-front cost of batteries is a key reason. A household battery stores excess electricity generated by your solar power system. You can use it later when solar generation can't meet your needs -- for example, at night or on cloudy days. This reduces the amount of power you buy from the grid.

How much does a solar battery cost?

Solar batteries come with a hefty upfront cost. The actual cost will depend on your home and the size of the battery you want or need, but it can range between \$1,000 and \$10,000. You'll likely need two batteries during the life of your solar panels. Batteries last around 15 years, while solar panels last about 25 years.

Are solar panels worth the cost?

By themselves, solar panels are often worth the cost because they can directly reduce your electricity bills. Solar batteries, on the other hand, can make economic sense, but they usually just add peace of mind. Whether a battery is worth it depends on how much you value what the benefits it can provide.

Are solar batteries a good investment?

While solar batteries will help you cut costs on your electricity bill by reducing your reliance on the grid, they are still a significant financial investment.
