

Makita battery charger solid red light

What does a red light on a Makita battery charger mean?

A solid red light means your battery is below 80% and having a good time charging as it should be. Don't panic, the red light on your Makita battery charger is a good thing, not like a red light on your dashboard. When the battery cartridge is inserted, the red charging light will light up and charging will begin.

How do I know if my Makita battery is charging?

Don't plug the battery into your Makita charger before seeing this light. The battery won't charge, and in worst-case scenarios, it might get damaged. After you plug the battery into your Makita charger, you should see a solid red light (as seen below). This indicates that the battery is charging as normal, but isn't close to full charge yet.

Why is my Makita Charger light flashing red?

If your Makita charger light is flashing red, this means that the battery is either too hot or too cold to charge. Charging a lithium-ion battery outside of the temperature range of 32-104 degrees Fahrenheit can damage the battery. However, if the charger is flashing yellow, it is signaling a cooling abnormality.

How do I know if my 18V LXT rapid charger is charging?

There are three lights on the 18V LXT Rapid Charger -- red, green, and yellow. When the charger is first plugged in, a flashing green light will appear meaning it is ready for a battery. Once a battery is locked in for charging, one of two light options will happen. A solid red light means that the battery is charging and below 80%.

Why are there no lights on my Makita Charger?

If there are no lights showing on your Makita charger it is not receiving power. When the Makita charger is plugged in and receiving power, a single green light will start to flash. This signals that a battery is ready to be inserted. Makita Battery Charger (no power input)

What does a flashing light on a Makita battery charger mean?

A flashing light on a Makita battery charger is not necessarily a sign of trouble. Like most brands, this one has a light that flashes when the battery is charging successfully. In other words, you want the light to flash. If the light doesn't flash during the charging phase, something has gone wrong. You should worry.
